READINGS · DAY 3

Survey analysis

Design, weights and the precision of official estimates. Short, targeted reading: the parts that match today, not whole books.

R04 United Nations Statistics Division (2008). *Designing Household Survey Samples: Practical Guidelines*. Studies in Methods, Series F No. 98. New York: United Nations.
Read: The chapters on design effects and on the estimation of sampling errors.
Why today: The UN reference on two-stage household samples like the LFS: why clustering widens confidence intervals and how much.
`https://unstats.un.org/unsd/publication/seriesf/seriesf_98e.pdf`
Free on the UN site: read it there (link only).

R06 Eurostat (2013). *Handbook on Precision Requirements and Variance Estimation for ESS Household Surveys*. Methodologies and Working Papers. Luxembourg.
Read: The sections on precision requirements and on variance estimation methods (linearisation, replication).
Why today: The European rules for when a published estimate is precise enough, which is the logic behind today's coefficient-of-variation flag.
`https://ec.europa.eu/eurostat/web/products-manuals-and-guidelines/-/ks-ra-13-029`
Free on the Eurostat site (link only).

R05 Eurostat (2008). *Survey Sampling Reference Guidelines: Introduction to Sample Design and Estimation Techniques*. Methodologies and Working Papers. Luxembourg.
Read: The sections on stratification, cluster sampling and weighting.
Why today: A short, readable account of the design that `svyset` declares.
`https://ec.europa.eu/eurostat/web/products-manuals-and-guidelines/-/ks-ra-08-003`
Free on the Eurostat site (link only).

R07 Heeringa, S. G., West, B. T. and Berglund, P. A. (2017). *Applied Survey Data Analysis*, 2nd ed. Boca Raton, FL: CRC Press.
Read: The chapters on preparing data for analysis (`svyset`) and on descriptive estimation.
Why today: The standard textbook on design-based analysis, with Stata syntax throughout.
Copyrighted book: cited only.

R13 StataCorp. *Stata Reference Manuals* (installed with Stata): [U] User's Guide, [D] Data Management, [G] Graphics, [SVY] Survey Data, [R] Base Reference, [TS] Time Series, [XT] Longitudinal Data/Panel Data, [P] Programming, [RPT] Reporting.
Read: [SVY] the introduction, `svyset`, `svy estimation`, `subpopulation estimation`.
Why today: Why `subpop()` and not `if`: the manual's own explanation.
Installed with Stata. Open them from Stata: `help` *command*, then the PDF link at the top of the help page. Not copied into this package.

Codes R01–R13 are the same on every day's list and in the workbook bibliography. Links checked October 2026. Copyrighted books and the Stata manuals are cited, not copied; the open-licence documents named *in this folder* are shared under their stated licence.
