Getting every PC ready

For NBS IT and for the trainer. Twenty minutes per room if done the day before; the course can also start from Day 1 with the folders built in class.

What each PC needs

- Stata 17 or newer, any edition. NBS runs Stata 19.5; every course file was run and checked on it.
- Excel and Word (or programs that open .xlsx and .docx), to look at the files Stata writes.
- The right to create and write in `C:\NBS_Stata`. If NBS-managed PCs block this, agree one other folder for the whole room before Day 1: every course file is written for one path.
- No internet. Everything comes on the USB stick: the five days' files, the data and the handouts.

Two ways to set up

A · One run per PC (recommended, the day before)

1. Copy the USB folder `NBS_Stata_USB` to the PC, or plug the stick in.
2. Open `setup/install_course.do` by double-clicking it. Stata opens in that folder.
3. Press Ctrl + D. The last line reads **setup OK** with the Stata version.
4. Open `setup/setup_check.do` and press Ctrl + D. The last line reads **setup check: 7 of 7 OK**.

The install is safe to repeat: course files are replaced, a participant's own `my_dayN.do` files are never touched.

B · In the room, on Day 1

Participants build `C:\NBS_Stata`, its folders and the data copy themselves in Part 1 of Day 1; the slides walk them through it. Use this route when IT cannot visit the PCs in advance. Run `setup_check.do` on any PC that misbehaves.

The trainer PC

In `install_course.do` set `global with_solutions 1`: the solutions then go to `C:\NBS_Stata\_trainer`, never to a participant PC.

When a check fails

Check	What to do
1 Stata version	The course needs 17 or newer. Use another PC.
2 Folders	Run `install_course.do` again, or create the missing folder by hand. Folder names have no capitals and no spaces.
3 Data files	Copy the missing file from the USB `data` folder into `C:\NBS_Stata\data`.
4 Raw file	The file in `data` is not the course file: copy `lfs_raw.dta` again from the USB.
5 Log	Writing in `C:\NBS_Stata` is blocked. Ask IT, or move the whole room to the agreed folder.
6 Excel and Word	Close Excel and Word, then run the check again. If it still fails, writing in `output` is blocked.
7 Chart	Run the check again after closing any open graph window.

What is where

`NBS_Stata_USB`	The participant copy: `data`, `day1`–`day5` (the exercise files, laid out as the slides show them), `handouts` (slides, workbook, cheat sheets, readings), `setup`.
`NBS_Stata_Workshop`	The full package for NBS: per day `slides`, `exercises`, `solutions`, `readings`, `materials`; plus `assessment`, `certificates`, `feedback`, `instructor` (guides, speaker notes, editable slide sources) and `setup`.
`C:\NBS_Stata`	Where participants work all week. Its layout is the same on every PC.
